## ESTANTERÍAS RECORD

*identity*

Estanterías Record S.L is a company devoted to design, manufacture and installation of storage solutions for more than 40 years. Our product range includes, from light duty racks for basic requirements to large and complex systems, responding to any logistic issue.

Our projects are developed by a skilled and qualified team of professionals, who make use of the most productive technological platforms, considering current regulation and control standards about design and calculation methodology. Costumers can be absolutely confident that our products meet the most rigorous requirements relating to security, safety and technical solvency, eventually, our costumer can be confident that our systems fulfill any institutional requirement.

Every storage solution must be assessed efficiently in order to save resources and reduce costs. In this sense, our brand presents a vast portfolio of consultancy services, after-sale support, maintenance and inspection, to provide the highest quality and security for each one of our storage systems

One of our added values is our concern over each particular project. We study every case with each specific challenge and requirement as a mean to reach maximum efficacy and adaptability of our solutions to obtain the costumer´s total satisfaction.

This document shows a general view of the regular applications and uses that respond to the most common needs or requests. Don´t hesitate to contact us to get further information.

## CONVENTIONAL PALLET RACKING

*heavy duty*

This system provides the most effective solution for the storage of heavy duty in pallets due to the low installation and maintenance costs, its resistance, great versatility and adaptability to any type of duty, no matter its size or weight. Access to each unit is direct and selective, enabling an intense stock flow and optimizing the warehouse costs management.

## DRIVE-IN PALLET RACK

*heavy duty*

The perfect system if prioritizes capacity and space management rather than rapidity and selective handling. On having done without corridors, the use of space is maximal, becoming the best option for homogenous merchandise, with a moderate turnover and a low grade of obsolescence providing logistic control and a systematic monitoring of the traffic flows.

## **PALLET RACKING OVER PICKING LEVELS**

*heavy duty / medium weight*

Mixed storage system, suitable solution when is necessary to combine pallet and handling goods management. Structure's lower levels are designed for manual picking activities. Top shelves are set up to keep palletized stock reserves. The major benefits are flexibility of use and perfect adjustment to different types of merchandise.

## **MEZZANINE OVER PALLET RACK**

*heavy duty*

Over pallet rack is provided a passable, diaphanous floor in order to increase useful surface to store merchandise and make the available room height longer. There is a wide range of useful options: install racks for not palletized merchandise, enable stock reserves control, place irregular duty or those materials which are not possible to locate in other shelves.

## MEZZANINE FLOOR

*heavy duty*

The structure is built by at least one raised passable area and connected to each other by access ladders. It provides maximum utilization of the warehouse height, setting additional levels aimed to allocate offices or to store goods, merchandise etc. Is not required to pin it to any existing structural element and is absolutely removable and reconfigurable.

## MEZZANINE OVER PICKING

*medium weight duty*

Over a racking system for picking, a crossable roof is enabled with the same surface size than the facility that holds it and which could be appropriate for multiple uses: Store goods with different and irregular sizes and shapes either bulk or in containers, put up other shelves, lockers or any other kind of equipment.

## CONVENTIONAL PICKING

*medium weight duty*

Is the most versatile option for handling products storage management with many references and diversified picking. The system considers a wide range of accessories and settings, what makes it suitable for a great variety of merchandise and logistics purposes. It allows an accurate inventory, maximizing the warehouse possibilities with a controlled investment.

## PICKING RACK OVER FLOOR

*medium weight duty*

To maximize spare height, picking racks may be risen as much as necessary, implementing a one or two floors crossable composition supported by its own structure, conveys through ladders conveniently located according to safety and accessibility requirements. The aim of the storage system is to achieve the greatest performance, utility and capability.

## BRICORD

*medium weight duty*

Is the most appropriate solution for picking storage, whereby duty needs are less demanding. Its clear design and an horizontal elements fixing system, without screws gives a neat and tidy appearance to the elements that fits perfectly in environments that require a cleaner look. Duty levels are available in two different setting depending on the required bearing capacity.

## LIGHT DUTY RACKS

*light duty*

Is the most economical and convenient option for any application, either for industry, commerce or domestic usage. There is a wide range of fittings, very easy to assembly, many possible settings and perfect adjustment, become suitable to satisfy any storage needs. Its reliability and design have been clearly proven by a large lifecycle and its presence in the market.

## MODULAR KITS

*light duty*

This system is based on the conventional rack system. Several standard modules are designed with a predetermined structure and size, to be used separately. Presented in packs, those racks are defined by huge possibilities to adapt or integrate to any kind of environment, also for the versatility and a beautiful aesthetic appearance.

## BOOK SHELVING

*light duty*

Designed and focused on documentation storage, is also suitable for some other uses which require shelves with an excellent appearance that exhibit a careful completion, high quality materials and at the same time and to have a huge capacity and flexibility. The racks fixing system allows shelf adjustment at the desired height in order to locate different measurement goods.

## MOBILE SHELVING

*light duty*

Modules of the book storage shelves may be installed over mobile carriages, moves over rails and allows an horizontal movement of the locker, removing every corridor apart from the one that serves to access to the block through a convenient mechanism, very easy to use; costumers can optimize use of space at least in 50%.

## METAL LOCKERS

*light duty*

As additional elements in storage solutions catalogue we offer a wide range of lockers and benches for changing rooms. Those items have a great durability, high quality and a compact design. Its modular parts are able to install, safe and easily, without screws or any tool necessary allows a broad of configurations that adapt the product to any area or environment.

## CANTILEVER RACKING

*heavy duty*

This type of rack is suitable for the storage of high length elements as tubes, pipes, wooden or metallic sheets among other items. The structural elements and the assembly system is designed to guarantee an outstanding performance regardless conditions or use; for every size, format or weight of the merchandise.

## CABLE RACKS

*heavy duty*

This solution is specifically suitable to locate products with cylindrical body with central axis, as coils, cable reel, plastic tube, paper, etc. Due to its physical properties, the system allows an organized and accessible duty distribution, a convenient and safe merchandise handling and a flexible answer to any relocation necessity.

## TYRE RACKS

*medium weight duty*

Based on the versatility of the picking racking system, providing individual settings to storage efficiently tyres and wheels. The simplicity and functionality of this concept grant the most useful and economical solution for this particular need.

## HANGING RACK

*medium weight duty*

This composition is specifically suited to solve any storage problem related to picking and handling clothes hooked in hangers. Design and constructive procedure turn out appropriate when users are chasing high productivity, flexibility and space saving, in the meantime a careful handling and an effective and clean product disposal.

## ESTANTERÍAS RECORD

*outstanding quality*

Our product's proven quality is the basis of the commercial offer. The productive models and the high performance solutions developed in our manufacturing plants fulfill the most challenging industrial standards. Any material used in the production process is subject of permanent quality controls, ensuring a proper performance and full effectiveness.

To sum up our skilled R&D department drives the commercial proposal to become leader in competitiveness. Our commitment to exceed costumers expectations position Estanterías Record as a highly recognized and respected brand within a specialized market in constant evolution.
